

CENTURION®

SORBAVIEW® SHIELD **PERIPHERAL**

PERIPHERAL SECUREMENT SOLVED

Centurion SorbaView SHIELD is a one-step catheter securement system that combines the features and benefits of a SorbaView Dressing with Shield Technology. This combination of a premium-quality window dressing and superior-strength catheter securement keeps catheters in place, lowering the risk of complications such as dislodgement, phlebitis, extravasation and infiltration.

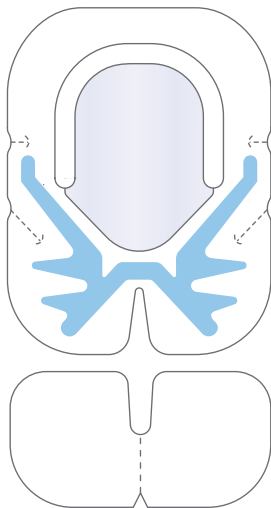

BENEFITS FOR CAREGIVERS, HOSPITALS AND PATIENTS

- Shield Technology™ provides effective catheter securement and stabilization as part of the normal dressing procedure – no extra steps needed
- Prevents catheter movement, so the risk of an IV complication – such as dislodgement, phlebitis, extravasation or infiltration – is dramatically reduced
- 96-hour wear time reduces number of unscheduled re-starts
- IV lines stay put, even when active patients are transferred between departments
- Easy to apply – won't stick to itself during application
- Using one product instead of two lowers costs
- Establishes a standard of care and eliminates inconsistent methods of securement
- Latex free, non-sensitizing adhesive
- Available in individual sterile packages or in custom IV Start or Dressing Change Trays

DESIGNED FOR PERIPHERAL APPLICATIONS

Works with Multiple Catheter Types

SV233UDT

Stabilizes the site to help prevent catheter movement
